Functional Requirements:

1.Card Issuance:

The system should support issuing new ATM cards to account holders .

Each card must be associated with an account, unique card number, and a PIN.

2.PIN Management:

Users should be able to set or change their ATM PIN .

The system should enforce security rules for PIN creation (e.g., minimum length, complexity).

Non-Functional Requirements:

1.Security:

- The ATM card system must use secure encryption methods to protect card data during transactions (e.g., EMV chip technology).
- PIN and card information must be encrypted both at rest and during transmission.
- Implement strong anti-fraud measures like real-time fraud detection and multi-factor authentication for online transactions.

2. Availability:

- The ATM card system must be available 24/7 with minimal downtime.
- Card transactions must be processed in real time to reflect changes immediately on the user's account.
